

Nebula Stars Anthill

White Paper V0.30

(Document will be brought to evolve)

Introduction

This document is intended to describe the Nebula Stars Anthill project and the resulting Token, the team, the tokenomics, the supports, the bonuses and the timeline

The different parts of the project will be detailed, you will find the different customers for each support, the operation of the project, the blockchain used, the various choices, donations, rewards, legal clauses, risks, ...

We will try to detail all this as best we can in order to make the project understandable and clear. This document is provided in its alpha phase, it will evolve gradually. Its current stage does not represent the full depth of the project, we ask you to be lenient about the gaps and defects, you can report to us on the support the elements misunderstood or lacking in detail. But we remind you that this document will evolve over time and as developments occur.

The Nebula Stars Anthill Project

Le concept :

A new concept for commenting and chatting about a URL without depending on the restrictions of hosting platforms.

How the concept works:

The concept of Nebula Stars Anthill wants to be simple. This is the ability to create a nebula about a url and let people use their stars to comment or discuss its topic.

This concept is concentrated on a platform that allows you to add your url, having, or not having, a right of reply on the original platform, then to comment or discuss freely and responsibly the written remarks. For example an article is published on the internet but there is no comment space. A youtube/dailymotion/vimeo/... blocked the chat space for a special video. Creating a nebula allows you to create a space dedicated to your freedom to comment, to discuss about a subject that is proposed to you while remaining free and responsible for what you write.

The nebula created, as well as their content, have no expiration date, are linked to their author and in fact attached to the cosmos throughout the existence of the project and the Solana blockchain.

Technical choices

Speed of transaction:

The project is made with Solana, the most powerful and advanced blockchain.

Transfer capability:

The transfer capability of the Solana blockchain is superior to that of Visa, which allows an extremely high number of transactions per second.

Simple and easy transfer:

The token can be transferred quickly by the normal means of using the wallet, but can also be transferred by NFC from the client.

Transaction price:

The price of transactions is tiny on the Solana blockchain.

Wallet security:

The wallet is hosted on the solana blockchain and type paper. At the creation of it a seedkey is transmitted to the user who will have to keep it.

Android Client:

The valid Android client is distributed on google's PlayStore without compensation.

iOS Client:

The iOS client is under development...

Technical choices (wallets)

Android wallets:

- In-app wallet
- MathWallet5
- Trust wallet

⚠ Because of bugs of some external apps it can change to «In-app wallet» only

Web wallets:

- Sollet
- Slope web
- Solong
- Solflare Web
- Ledger
- MathWallet

Technical choices (exchanges)

Exchanges:

- Dexlab
- Raydium
- Cykura
- Step
- Gate.io (2023)

Project implementation

Data storage:

The storage of connection data is in a secure database, passwords are hashed. The data of the nebulae is stored in the Solana blockchain.

Use of data:

The Nebula Stars Anthill team uses its users' data to connect to Android/Ios/Website clients. The data is not currently passed on to third parties for exploitation. There are also no plans for a partnership in the use of this personal data.

Limit on the number of users:

There is currently no limit to the number of users.

User Identification:

Users are currently identified by their email, other data is currently not exploited.

User's Airdrop:

The installation of a client allows the cloud mining of the airdrop. This cloud mining does this over an interval of 7 days and requires a reactivation subject to reward. This cloud mining is operated on the servers, it does not use the processor of the device where the client is installed. The servers are operational 24/7.

Project implementation

Payment to the user:

Payments to users are issued from a Solana wallet, only a compatible wallet allows the receipt of NSA.

User payment:

The user can issue transactions from his Solana wallet, only a compatible wallet allows the sending of NSA.

Responsibility of the user:

The user remains solely responsible for his nebula and his comments or discussions.

User remuneration:

The user is rewarded according to his use of the platform and according to the remuneration charter.

Donation between users:

The donation to nebula creators does this via the dedicated service. The donation volume is user-defined and is not limited.

The NSA SPL-TOKEN (Nebula Stars Anthill)

The SPL-TOKEN supply :

The actual supply was 1.100.000.000.000000000

The SPL-TOKEN decimals :

The number of current decimal places is 9

The name of the SPL-TOKEN:

The name of the spl-token is currently Nebula Stars
Anthill

The address of the SPL-TOKEN:

The adresse was

4CuBdvKbwY1wo8o9sDs7mUQZTL1weKitpBA6X2D5a1nX

The SPL-TOKEN owner program :

The owner program was «Token Program» of Solana

The authority of the SPL-TOKEN:

The SoftCap :

The softcap is \$1,037,999 relative to a semi-global scope.

The HardCap :

The hardcap is \$17.300.000 relative to a semi-global scope.

The value of an NSA token at start:

1 NSA token worth \$0.015727272

Tokenomics

distribution	%	volume	% of price
Private sale	9%	99.000.000	50% to 5% According to nb. of tokens sent
Public sale	34%	374.000.000	100%
Airdrop mining, Awards	18%	198.000.000	100%
Development, Advertising, Treasury	28%	308.000.000	---
Team and Founder	11%	121.000.000	---

Token Ratio and actions cost

Ratio :

The ratio between the value of the tokens and the market price is deducted according to the purchases and sales. The cost of the action is proportional to this ratio.

The current cost set for the creations is available in the following table.

These usage costs are estimated based on an ad-free service.

action	volume	prix
Create a Nebula	0.083 NSA	---
Create Comment	0.00001 NSA	---
Submit a Vote	0 NSA	0
Submit a Report	0 NSA	0

Timeline

distribution	date
Switching to MainNET	End of March 2022
Private sale	June to August 2022 limit from 50\$ to 56.000\$
Public sale	September 2022 and no end date
Operating Funds	Distributed by interval according to the costs necessary for the operation
Collect mining on MainNET	October 2022 and no end date
Launch of the platform	August 2022 beta closed. October 2022 open beta

Private sale tokens are paid into the wallet on the MainNET network.

The remaining tokens from the public sale will be added to the publi sale.

The tokens of the private sale will be burned if the fundraising necessary for the operation of the project is reached.

The mining collection will be effective one month after the launch of the platform in closed beta.

Rewards and costs

Stacking :

90 days : 2%

180 days : 5%

365 days : 15%

Platform:

(These scales will evolve and be reworked)

Consultation of nebula:

No cost and reward of 1 star

Creation of nebula:

Cost of 1 nebula per creation. Reward of 2 nebula every 5 creations. If the nebula wins more than 100 comments, it is returned to the account.

Comment on a nebula:

Cost of 1 star per creation, 25% given to the author, 30% stacked for the user and 45% paid to the platform.

Vote for a nebula:

No set cost and 10 star reward.

The NFT

To allow the valorization of content created by the community and concerning the project, an NFT section will be created on the website and included in the various customers.

This section will allow the direct sale of users' creations to the highest bidders.

This content is currently broadcast on the Telegram channel free of charge by various users.

The whole Nebula Stars Anthill team would like to thank all these creators!

Donations to Creators

Donations to nebula creators are free and must be made using the associated "creator donation" service.

Benefits:

- It participates in the improvement of contributions and their quality
- It rewards creators, motivates them and accelerates their development
- He gets on his wallet 50% in NSA of the total of his donations

Donations

Donations to the project are free and must be made in SOL, FTM or BTC and at least worth 15 usdt. A donation to the project is not a purchase of tokens during sales.

Benefits:

- At start of the public sale the amount of the donation will be reversed to the user wallet in July 2022.
 - It obtains a "Donor" status
 - It gets a cloud mining time divided by 4
 - He gets a crest on his profile
 - He is rewarded with 4 nebulae every 5 creations
- For a donation of more than 50 USDT annually, the creations are free of charge

Recruitment

In order to strengthen the team, a recruitment campaign will be set up in 2022. This campaign is not currently precisely planned.

This campaign should start with the reinforcement of the support team, then the development team in a second time.

It is necessary to hire a translator to translate all documents correctly and clearly.

It is also planned to recruit advisors in 2022/2023.

The Team

The founder :

NonoLeRobotLunaire

The developers:

Pierre ROBIN (ANDROID)

Antoine BERGOT (ANDROID & WEB)

Frédéric SMITH (IOS)

The support :

Kristophe SANTOS

Risks

There is no certainty that the objectives defined in the document, planned and envisaged, will be achieved. The acquirer acknowledges having been informed and warned that the value of the tokens is not guaranteed and is likely to vary upwards or downwards, or even to the total loss of value. Any buyer of tokens declares to be able to bear the consequences of the loss in part or in whole of his investment. There is currently no guarantee that the acquirer can resell its tokens, this risk must be accepted by any acquirer. The purchaser bears any loss or disclosure of his private key.

The acquisition of tokens can be done in SOL, EUR, USDT, BTC or FTM. The acquirer bears the cost of converting the tokens to another digital currency as well as the cost of transactions. The conversion must be done legally on an exchange platform. Any variation in the price of the token or conversion price is borne by the acquirer. The purchaser shall bear the payment of any tax, tax, contribution or contribution, direct or indirect, due under this venue and/or holding.

The founder, team or support of the Nebula Stars Anthill project declines all responsibility in the event of malfunction, unexpected or unpredictable operations. The purchaser assumes the fact of not transmitting to one or more third parties, his account data, his security data, his private key or any other data concerning him. No assurance can be given as to the possible consequences of judicial or administrative decisions or changes to European legislation or regulations.

The purchaser fully acknowledges that these clauses may need to evolve and be clarified in future versions of the document. NSA tokens are sold "as is", without warranty of any kind, either implicitly or explicitly. The Acquirer expressly and irrevocably accepts all liability and risks associated with the acquisition of NSA Tokens hereunder, the rights to which such NSA Tokens entitle and their use, including but not limited to the risks referred to above.

Thanks

We would like to sincerely thank all investors, the entire community and all affiliates.

We will do everything possible to make you travel in an enriching, entertaining and friendly experience allowing you to find free spaces of exchange on the subject you wish.
